

ENHANCING PRODUCTIVITY ON THE TARMAC

Smart Talk & Inspector+ by WNS

BETTER COMMUNICATION

Strengthen communication across departments, management, and locations across the airport. Users can call, text, push-to-talk, and make a video call on a secured platform.

INCREASE PRODUCTIVITY

Track Tank Farm, ATA103 inspections and maintenance work orders electronically with Inspector+. Eliminate pen and paper tracking and ensure accountability across the team.

FASTER FUELING TIMES

Reduce the paper trail and worries of a lost fuel ticket, by transitioning to an electronic fuel ticket (eFT). Fuel ticket data is available online and exportable via an Excel Spreadsheet or API.

QUICKER TURN-TIMES

SmartTalk and Inspector+ together provide a powerful set of applications to help deliver results. Utilizing this technology can lead to quicker turn-times.
