

# EMPOWER YOUR DEPARTMENT WITH Inspector

## How Inspector+ Works

Inspector+ by WNS is an Android based app that utilizes barcode scanning to ensure the user was at the point-of-inspection. Scanning the barcode proves the person was there. Reports are completed on the rugged handheld and can identify if the item or location needs maintenance. If selected "yes," Inspector+ will automatically create a work order on the back-end tied to the inspection. Data is submitted via a 4G/LTE connection or WiFi. If no coverage is available, the records are stored on the device until back in range of a signal. All data is hosted securely in the Cloud with Microsoft Azure.

## Multiple Facilities, No Worries

Designed with you in mind Inspector+ by WNS was created to support multiple locations. Our WNS Team works closely with Clients to design individual inspection forms catered to their unique needs. Gain real-time data from multiple facilities on one platform. Built on the Android and Microsoft Azure platform, Inspector+ has the ability to scale and host data in secure environments. Inspector+ is a tool to help your operations increase productivity, ensure compliance, and empower your department.

## Inspector+ Features

**Custom Inspection Forms**

**Android & Cloud  
Based Application**

**Software & Hardware  
Packages Available**
